- ▶ Benefit from Omnibus software without the capital outlay

Need some extra support for a major network re-scheduling? Or do you just occasionally need some scheduling expertise? Whatever the situation, if you have a scheduling challenge, Omnibus Consultancy Services can help you out. And you don't even have to be an Omnibus customer.

Omnibus has a tremendous breadth of transport scheduling experience. For an operator facing a major rescheduling exercise that is overloading their own resources, Omnibus can provide consultants to lend a hand.

And this service is not limited to companies using Omnibus software. Omnibus Consultancy Services are available to any operator or Local Authority with a need for expertise on an ad-hoc basis: from larger organisations, who do not wish to tie up valuable staff, to smaller companies, who see that utilising external expertise can be a cost-effective way of designing and implementing efficient schedules.

Recent projects undertaken by the Omnibus team include assistance with tender bids, schedules compilation for major rail replacement services, and general bus service scheduling. Users of the Omnibus Consultancy Services have been a cross section of bus and light rail operators from around the UK.
