- ▶ Use specified route branding and colour
- ▶ Shows all trips or 'then every x minutes'
- ▶ Batch printing of displays

KEY BENEFITS

- ▶ Puts your corporate identity on the street
- ▶ Accuracy and consistency of displays
- ▶ Reduces production times
- ▶ Simplifies the production process
- ▶ Saves time and money through increased efficiency

Make the most of your data

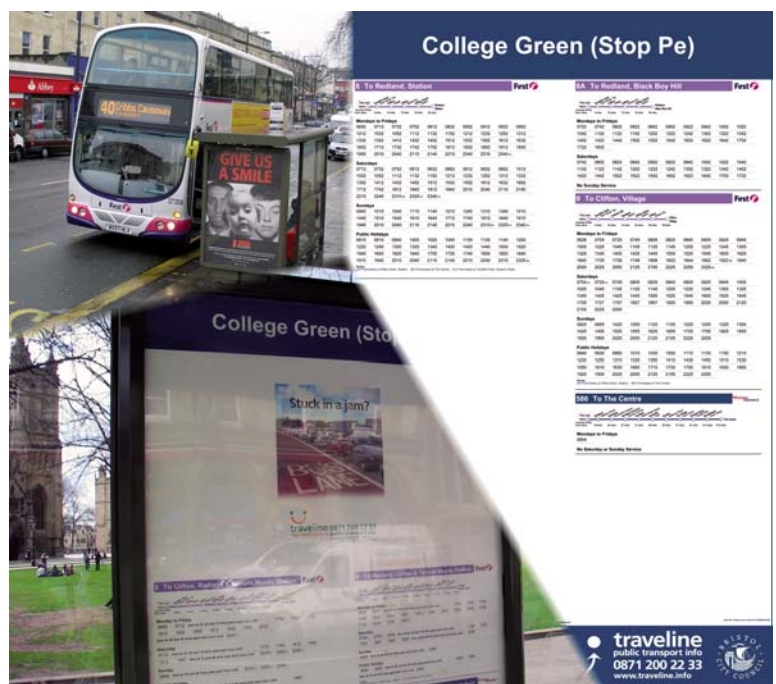

OmniSTOP links naturally with OmniTIMES

Also consider:

- ▶ OmniEXPORT - Format data for publicity
- ▶ OmniFLAG - Bus stop asset management
- ▶ Omnibus Consultancy Services

For operators or local authorities wanting to provide accurate timetable information – and what other kind is there? – OmniSTOP has made quick and easy what was once a time-consuming process.

Users can create attractive and accurate bus stop displays using OmniSTOP in conjunction with OmniTIMES timetable data. OmniSTOP removes the need for designers or design software, as it makes use of data already created to schedule services. This saves both time and money.

For each stop, or series of stops, users may specify individual designs, and simply let OmniSTOP generate displays accurate for each, regardless of where the timing points are. In addition, OmniSTOP offers the option of batch printing generated stops all at once. This feature drastically reduces the time spent altering or creating new displays to minutes.

When designing displays, users can specify one of several print styles, including a map bar option, and customise displays to use different colours, company logos and special messages.

As well as stop displays, OmniSTOP can produce a handy Index to Places Served from a given location.

OmniSTOP is offered alongside other Omnibus modules (specifically OmniTIMES), or as a part of the Omnibus Consultancy Service - where displays can be designed and produced to a client's needs.
